Type key

Example	UPS	(D)	65	-60	(I2)	F(-)	280
Type range							
Twin-head pump							
Nominal flange diameter [mm]							
Max. head [dm]							
Number of motor poles, (stated if available both as 2- and 4-pole motor)							
F - Pump with flanges B - Pump with bronze housing							
Port-to-port length [mm]							

Energy labelling

Grundfos UPS circulator pumps are provided with the energy label, except the bronze pumps (B-version).

The energy label indicates the energy-saving level of the pump. The energy classification system has seven levels, i.e. from A to G. Level A is the best.

The energy label can be used to compare pumps of the same type and size.

The energy labelling of the pumps are stated on the data sheet of the pump in question.

Applications

Grundfos circulator pumps, types UPS, UPSD, are designed for circulation of liquids in heating and air-conditioning systems. Pumps with bronze pump housings are suitable for circulation in domestic hot water systems.

General examples of systems in which UPS, UPSD pumps are suitable are shown below.

UPS, UPSD are a complete line of circulator pumps with three speeds.

The pumps come both as single and twin-head pumps.

Heating systems

- One- and two-pipe heating systems
- Main pumps
- Zone pumps
- Boiler shunt pumps
- Pumps for heating surfaces
- Calorifers
- Underfloor heating systems
- Solar heating systems
- Geothermal heating systems
- Heat recovery systems

TM01 0168 0697

Domestic hot water systems

- Domestic hot water systems

TM01 0169 0697

Cooling and air-conditioning systems

- Two-pipe air-conditioning systems
- Main pumps
- Zone pumps
- Pumps for refrigeration units
- Heat pump systems
- Geothermal heating systems
- Heat recovery systems

TM01 0170 0697

Speed switch

The pump offers three speeds for adjustment of pump performance to the system in question.

Fig. 1 Pump performance at the three speeds

The speeds of the various speed switch positions are shown in the table below:

Switch position	Speed in % of maximum speed	
	Single-phase pumps	Three-phase pumps
1	approx. 60 %	approx. 70 %
2	approx. 80 %	approx. 85 %
3	100 %	100 %

Change to a lower speed enables reduction in energy consumption and less noise in the system.

Fig. 2 Indicator lights on terminal box

Standard module

The module is standard in single-head pumps and is also available for twin-head pumps.

Connect the pump to the mains via an external contactor. Connect the contactor to the pump's built-in thermal overload switch to protect the pump against overload at all three speeds.

Fig. 3 Standard module

Indicator lights on standard module

The function of the indicator lights on the terminal box is as shown in the following tables.

Single-phase pumps

Single-phase pumps incorporate a green indicator light only:

Indicator light	Description
On	The electricity supply has been switched on.
Off	The electricity supply has been switched off.

Three-phase pumps

Three-phase pumps incorporate a green and a red indicator light:

Indicator lights		Description
Green	Red	
Off	Off	The electricity supply has been switched off.
On	Off	The electricity supply has been switched on.
On	On	The electricity supply has been switched on. The direction of rotation is wrong.

Pumps with protection module

Fig. 4 Protection module

Protection module

The protection module is supplied as an accessory for single-head and twin-head pumps.

When equipped with a protection module, the pump can be connected to an external switch directly, as the built-in protection against overheating protects the pump at all three speeds. Furthermore, the module has two indicator lights.

Protection module indicator lights

The function of the indicator lights is shown in the table below.

Indicator lights		Description
Green	Red	
Off	Off	The pump has been stopped. The electricity supply has been switched off, thermally cut out or a phase is failing.
On	Off	The pump is operating.
On	On	Three-phase pumps only: The pump is operating, but the direction of rotation is not correct.
Off	On	The pump has been cut out by the thermal switch.

Note: Pumps with protection module must not be connected to a frequency converter.

Relay module

The relay module is standard in twin-head pumps and an **optional extra** for single-head pumps.

The module enables direct connection of the pump to an external mains switch and an external operating or fault indication device. The signal output for an external signal device can be set to activation during operation or fault by means of the selector switch.

As standard, the signal outputs of relay modules in twin-head pumps are interconnected so that the pumps are operating alternately as duty pump and standby pump.

The pump is connected directly to the mains as the pump incorporates overload protection at all three speeds. If the pump has been cut out by the thermal overload switch, it will restart automatically when it has cooled to normal temperature, provided the external on/off contact is closed.

Fig. 5 Relay module

Indicator lights on relay module

The indicator lights on pumps with relay module have more detailed operating and fault indications.

All pumps with relay module are equipped with a green and a red indicator light. Their functions are as shown in the table below.

Signal output of relay module

The relay module is equipped with a signal output for external operating or fault indication.

By means of the selector switch, the output can be used as:

- Operation signal output between terminals 2 and 3 or
- Fault signal output between terminals 1 and 3.

Functions of indicator lights and signal output

Indicator lights		Signal output		Description
Green	Red	Operation	Fault	
Off	Off			The pump has been stopped. The electricity supply has been switched off or a phase is failing.
Permanently on	Off			The pump is running.
Permanently on	Permanently on			Only three-phase pumps: The pump is running, but with wrong direction of rotation.
Off	Permanently on			The pump has been cut out by the thermal overload switch.
Flashes	Off			The pump has been stopped by an external on/off switch.
Flashes	Permanently on			The pump is or has been cut out by the thermal overload switch and it has been stopped by an external on/off switch.

Note: Pumps with relay module must not be connected to a frequency converter.

Operating modes of twin-head pumps

Twin-head pumps have a relay module in both terminal boxes, which are interconnected by a 4-core cable.

Fig. 6 Twin-head pump

In addition to the signal functions, the signal output of the relay module for twin-head pumps can be used for controlling the operating mode of pump 1 and 2. It is possible to choose between three operating modes:

1. **Alternating operation (factory setting).** The pumps operate alternately as duty and standby pump, respectively. Changeover takes place every 24 hours. If the duty pump is cut out due to a fault, the standby pump will automatically start. During changeover both pumps will be running for a short period to ensure a low-noise changeover.
2. **Standby operation.** The pumps operate continuously as duty and standby pump, respectively. If the duty pump is cut out due to a fault, the standby pump will automatically start at a signal from the output of the duty pump. The sequence can be changed to make the standby pump operate as duty pump.
3. **Single-pump operation.** The pumps run independently without communicating with each other.

Electrical data

Supply voltage and frequency:	1 x 230-240 V, 50 Hz
	3 x 230 V, 50 Hz
	3 x 400-415 V, 50 Hz.
Motor protection:	The pump requires no external motor protection if the motor is fitted with a protection module.
Back-up fuse:	Max. 10 A.
Enclosure class:	IP 44.
Insulation class:	H.
Screwed cable entries:	1 x M20 for mains connection.
	1 x M20 for signal output (blanked-off if pump with standard module).
	1 x M16 for capacitor connection (only single-phase pumps).
EMC (electromagnetic compatibility):	EN 61 000-6-2.
	EN 61 000-6-3.

Thermal overload switch

Voltage	250 V AC
Current	cos phi = 1.0: 2.5 A cos phi = 0.6: 1.6 A

Start/stop input (relay module)

External potential-free contact.

Maximum load: 250 V, 1.5 mA.

Minimum load: 100 V, 0.5 mA.

Operating/fault signal output (relay module)

Internal potential-free changeover contact.

Maximum load: 250 V, 2 A, AC.

Minimum load: 5 V, 100 mA, DC.

Electrical connection

The electrical connection and protection should be carried out in accordance with local regulations. Earthing or neutralization can be used for protection against indirect contact. A current- or voltage-operated earth-leakage circuit breaker can be used as extra protection.

Never make any connections in the pump terminal box unless the electricity supply has been switched off.

The pump must be earthed and connected to an external mains switch.

The operating voltage and frequency are marked on the pump nameplate. Make sure that the motor is suitable for the electricity supply on which it will be used.

Pumps with standard module

The pump must be connected to the mains via an external contactor. The contactor is to be connected to the pump's built-in thermal overload switch at terminals T1 and T2 to protect the pump against overheating at all three speeds.

Note: If the pump is also protected by means of a motor starter, the starter must be set to the current consumption of the pump at the chosen speed. The motor starter setting must be changed every time the pump speed is changed. The current consumption at the various speeds is stated on the pump nameplate.

External impulse switches

Fig. 7 External impulse switches

TM00 9173 0305

External changeover switch

Fig. 8 External changeover switch

Single-head pumps with protection module

The pump can be connected directly to the mains as the pump features built-in protection against overheating at all three speeds.

The figure below shows the electrical connection of single-phase and three-phase pumps.

Fig. 9 Electrical connections, protection module

Single-head pump with relay module

The pump can be connected directly to the mains as it incorporates protection against overheating at all three speeds.

The relay module has a signal output for an external operating or fault signal device. By means of the selector switch the signal output can be used as operation or fault signal output:

Operation

Fault

Note: The selector switch must not have been set to **alternating operation** (used in connection with twin-head pumps).

Operating indication

Fig. 10 Operating indication

Fault indication

Fig. 11 Fault indication

Twin-head pumps with relay module

The pumps are interconnected by a 4-core cable and factory-set to operating alternately as duty and standby pump. Changeover takes place every 24 hours. The following figures shows the electrical connections and the selector switch setting for the various operating modes.

Alternating operation (factory setting)

Fig. 12 Alternating operation

Standby operation

Standby operation with pump 1 as duty pump and pump 2 as standby pump.

Note: In this operating mode the selector switch of pump 2 must not have been set to alternating operation.

Fig. 13 Standby operation

Standby operation with pump 2 as duty pump and pump 1 as standby pump.

Note: In this operating mode the selector switch of pump 1 must not have been set to alternating operation.

Fig. 14 Standby operation

In the case of single-pump operation the cable between the pumps is to be removed. The pumps must be set individually and connected separately to mains, see page 11 "Single-head pump with relay module".

Signal output of twin-head pumps

The signal output of twin-head pumps can be used directly, **provided** it is not already being used for communication between the pumps.

If an output that is used for communication between the pumps is to be used as signal output, an intermediate relay is required. See example below.

The example shows a single-phase pump in alternating operation with external fault indication in case of fault on pump 2 or both pumps.

TM00 9179 0305

Fig. 15 Alternating operation with external fault indication

Installation

The pump must be installed with horizontal motor shaft.

TM02 1404 1101

Fig. 16 Flow direction

Note: Twin-head pumps in vertical pipes with downward liquid flow or in horizontal pipes must always run at maximum speed.

Twin-head pump mounted in horizontal pipes must be fitted with an automatic air vent in the upper part of the pump housing.

Terminal box positions

Single-head pumps

Fig. 17 Permissible terminal box positions

Twin-head pumps

TM02 1399 1101

Fig. 18 Permissible terminal box positions and flow direction of twin-head pumps

For standard terminal box positions, see technical data from page 15.

Construction

The UPS, UPSD pumps are of the canned rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid. Attention has been focused on using as few materials as possible, and the use of materials that might cause problems in connection with disposal have been omitted.

The pump offers these features:

- Three-speed motor
- Ceramic radial bearings
- Carbon thrust bearing
- Stainless-steel rotor can, bearing plate and rotor cladding
- Aluminium-alloy stator housing
- Cast iron or bronze pump housing
- Stator with built-in thermal overload switch.

Material specification

Pos.	Description	Material	DIN W.-Nr.
1	Terminal box	Composite PA66	
2	Inspection screw	Brass with nickel	
3	Nameplate	Composite PA66	
4	Stator housing	Aluminium AlSi 10Cu2	
	Stator windings	Copper wire	
	Stator winding cap	Composite PETP	
5	Cheese-head screw	Steel 8.8	
6	O-rings	EPDM rubber	
7	Outer bearing ring	Aluminium oxide/SiC	
	Rotor can	Stainless steel	1.4301
8	Shaft (cast iron pumps)	Stainless steel	1.4305
	Shaft (bronze pumps)	Stainless steel	1.4404
	Rotor cladding	Stainless steel	1.4301
9	Thrust bearing	Carbon MY 106	
10	Bearing plate	Stainless steel	1.4301
	Inner bearing ring	Aluminium oxide/SiC	
11	Stop ring	Stainless steel	1.4435
12	Split cone	Stainless steel	1.4305
13	Impeller	Stainless steel	1.4301
14	Nut	Stainless steel	1.4305
15	Neck ring	Stainless steel / PTFE	1.4301
16	Pump housing	Cast iron EN-GJL-250	EN-JL-1040
		Bronze CuSn10, DIN 1705	2.1050.01
17	Anti-friction ring	Brass/Stainless steel	
18	Non-return flap (Twin-head pumps)	EPDM rubber	
	Splash protection	Stainless steel	1.4305

Sectional drawing

Fig. 19 Sectional drawing

TM02 1397 2102

Pumped liquids

Thin, clean, non-aggressive and non-explosive liquids, not containing any solid particles, fibres or mineral oil. In domestic hot water systems, it is advisable to use bronze pumps only for water with a degree of hardness lower than approx. 14 °dH. For water with a higher degree of hardness, use a close-coupled pump type TP.

If the pump is installed in a heating system, the water should meet the requirements of accepted standards on water quality in heating systems, e.g. the German standard VDI 2035.

The pumps **must not** be used for the transfer of inflammable liquids such as diesel oil and petrol.

Temperature limits

Ambient temperature: 0 °C to 40 °C

Liquid temperature

- for short periods: +140 °C

- continuously: -10 °C to +120 °C

- domestic hot water: Up to +60 °C

Storage temperature: -30 °C to +55 °C.

Depending on the cast-iron version and the pump application, the maximum liquid temperature may be limited by local regulations and laws.

Technical data

Relative humidity: Max. 95 %.

Sound-pressure level: The sound-pressure level of the pump is lower than 41 dB(A) (reference: 20 mPa).

Test pressure: PN 6: 10 bar ~ 1.0 MPa
PN 10: 15 bar ~ 1.5 MPa
PN 6/10: 15 bar ~ 1.5 MPa.

Test liquid: +20 °C water containing corrosion inhibitor.

Inlet pressure

To avoid cavitation noise, the following minimum pressures are required at the pump suction flange:

Pump type	Liquid temperature		
	75°C	90°C	120°C
UPS, UPSD	[bar]	[bar]	[bar]
32-30 F 220	0.05	0.05	1.3

* Only available as single-head pump (UPS)

Curve conditions

The guidelines below apply to the performance curves in the following data sheets:

1. Due to the danger of overheating the pumps must not be used at a flow below 0.1 x Q at best efficiency point.
2. The **bold** parts of the curves show the **recommended** performance range.
3. Test liquid: Airless water.
4. The curves apply to a liquid temperature of 20 °C.
5. All curves show average values and **should not be used as guarantee curves**. If a stated minimum performance is required, individual measurements must be made.
6. The conversion between head H [m] and pressure p [kPa] has been made for water with a density of $\rho = 1000 \text{ kg/m}^3$. For liquids with other densities, e.g. hot water, the discharge pressure is proportional with the density.
7. Power curves, efficiency curves and electrical data for twin-head pumps apply to single-pump operation.

UPS 32-30 F 220, UPSD 32-30 F 220

Accessories

The following accessories are available for UPS, UPSD pumps:

- protection module
- relay module for single-head pumps
- relay module kit for twin-head pumps
- counter flanges (standard on pumps for the UK)
- insulation kit (only single-head pumps)
- base plate (only single-head pumps)
- blanking flanges (only twin-head pumps).

Counter flanges

A counter flange kit includes these parts:

- two flanges with internal thread (ISO seal thread) or two flanges for welding/soldering
- two gaskets
- bolts.

Product numbers of counter flanges

Rp: Flange with internal thread (ISO seal thread).

mm: Flange for welding/soldering.

3 x 230	96406610
3 x 400-415	96406609

A relay module kit for twin-head pumps includes these parts:

- two relay modules with screws and screwdriver
- two screwed cable entries
- one intermediate cable
- two wiring diagrams for terminal box covers.

Voltage [V]	Product number
1 x 230-240	96409231
3 x 230	96409230
3 x 400-415	96409229

Insulation kits

Single-head pumps can be fitted with an insulation covering made of expanded polypropylene, EPP.

The insulation kit, which is tailored to the individual pump type, has an insulating thickness corresponding to the nominal diameter of the pump.

The thermal conductivity of EPP is very low (0.04 W/m°C), i.e. the insulating property is very good.

The insulation kit encloses the entire pump housing. It consists of two or three parts which are easily fitted around the pump.

WebCAPS

WebCAPS is a **Web**-based **Computer Aided Product Selection** program available on www.grundfos.com.

WebCAPS contains detailed information on more than 185,000 Grundfos products in more than 20 languages.

In WebCAPS, all information is divided into 6 sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalogue

This section is based on fields of application and pump types, and contains

- technical data
- curves (QH, Eta, P1, P2, etc) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

In this section you can access all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps. Furthermore, this section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples, and gives easy step-by-step instructions in how to

- select the most suitable and efficient pump for your installation
- carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- analyse your selected pump via the built-in life cycle cost tool
- determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump. The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section it is possible to download two-dimensional (2D) and three-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

- Two-dimensional drawings:
- .dxf, wireframe drawings
 - .dwg, wireframe drawings.
- Three-dimensional drawings:
- .dwg, wireframe drawings (without surfaces)
 - .stp, solid drawings (with surfaces)
 - .eprt, E-drawings.

WinCAPS

Fig. 22 WinCAPS CD-ROM

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 185,000 Grundfos products in more than 20 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no Internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.
